LUBRICATION (without LUBRICATION SYSTEM MACHINES)

Use white spindle oil. When starting the machine initially and after kept away for a long time without using at all, oil sufficiently to respective necessary parts before staring operation and pre-running. (↓ oiling point)

Fig. 1

Fig. 2

Fig. 3

WITH TRIMMER MACHINES

Fig. 4

Fig. 5
To fill oil reservoir on top of machine until oil level reaches to upper reference line A. Always keep oil level is above lower reference line B.

Fig. 6

While operating machine, lubrication to each spots of upper part of machine are made automatically. When the machine is in continuous operation, stop oiling for a while at your option. In that case, turn dial until two points fit together, then the dial comes down and lubrication is stopped.

Fig. 7

NEEDLE

Fig. 8

Fig. 9

STANDARD NEEDLE

DP-F22, #14 ... Lower feed with roller presser foot machines
DP x 7, #18 ... Lower feed with flat presser foot machines
DP x 7, #24 ... Lower feed with large hook machines
DP x 17, #18 ... Needle feed, walking foot (except single needle, without reverse) machines
DP x 17, #19 ... With trimmer machines
DP x 17, #22 ... Needle feed, walking foot, single needle, without reverse machines
DP x 17, #24 ... Large hook machines (except lower feed machines)

1. Move needle bar to highest point.
2. Insert needle up as far as possible.
3. Long groove faces left. (in case 2-needle, the groove faces inside.)
4. Tighten needle set screw.

ROLLER PRESSER FOOT

Fig. 10

Inserting and removing bobbin

1. Pull up latch and remove bobbin from bobbin case.
2. To insert a full bobbin, hold it pulling out the end of thread by 5 cm, and place the bobbin into the bobbin case, and press down the latch.
3. Lead the end of thread pulled out through slot of the bobbin case, and under tension spring through between the bobbin case and opener.
4. Close cap, but leave a space for passage of the end of thread pulled out.
WINDING BOBBIN

1. Place a bobbin on the bobbin winder spindle as far as possible.
2. Lead thread as shown by Fig. 12 and wind several times on bobbin.
3. Press down lever for drive then start machine. Pulley will be disengaged from V-belt automatically after bobbin fills up with thread.

![Diagram of Winding Bobbin](image)

- Winding strength: Adjustable by serrated nut.
- Uneven winding: Adjustable by loosen screw (1) and move winder to right or to left.
- Winding amount: Adjustable by screw (2).

THREADING NEEDLE

1. Needle from left to right
2. Needle from inside to outside

![Diagram of Threading Needle](image)

THREAD TENSION

- Perfect stitching
- Bobbin thread
- Tight tension of needle thread
- Loose tension of needle thread

![Diagram of Thread Tension](image)

NEEDLE THREAD

- Less
- More
- Serrated nut

To adjust, turn serrated nut

![Diagram of Needle Thread](image)

BOBBIN THREAD

- Less
- More
- Tension regulating screw

To adjust, turn adjusting screw

![Diagram of Bobbin Thread](image)
ADJUSTING LIFT OF ALTERNATING PRESSER FEET
(Compound feed with walking foot machine only)

[Diagram of lift mechanism]

Fig. 19

To adjust, loosen wing nut and move link and stud assembly along slot.

TO REGULATE PRESSER FOOT PRESSURE
(without LUBRICATION)
(with LUBRICATION)

[Diagram of pressure adjustment]

Fig. 20

The pressure on the material should be as light as possible, while still sufficient to insure correct feeding.

ADJUSTING STITCH LENGTH

<table>
<thead>
<tr>
<th>Number (stitches/inch)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pressing down button A, turn pulley slowly toward you. Then plunger will enter into notch in feeding mechanism. Hold the plunger down and turn pulley either forward or rearward so that desired number on pulley may come at mark on arm. Then, release the plunger.</td>
</tr>
</tbody>
</table>

Fig. 22

REVERSE STITCHING
(only with reverse stitch mechanism.)

[Diagram of reverse stitching]

Fig. 23

To reverse stitching, press down the lever as far as it will go.

RE-ENGAGE SAFETY CLUTCH MECHANISM
(except MACHINES WITH ONLY LOWER FEED)

1. Remove any foreign matter which may have lodged in hook. Do not use any sharp-edged tools.
2. Pressing button B and turn pulley rearward slowly to re-engage safety clutch.

Fig. 24

TRIMMER (with TRIMMER MACHINES only)

[Diagram of trimmer mechanism]

Fig. 25

Fig. 26

When replacement of knife, loosen two screws.
