IMPORTANT

The purchaser must instruct all operators on the proper use of this equipment. All standard industrial safety measures and equipment should be provided to protect the operator. Operators must be cautioned that improper or careless use of this equipment may cause personal injury. If you do not have qualified operators to instruct new persons, contact your EASTMAN sales representative or EASTMAN factory direct.

Electrical connections and servicing to this equipment should be made by a qualified electrician who is familiar with applicable codes and regulations. Disconnect this equipment from electrical power source before proceeding with any disassembly for adjustment or repair.

The Auto Track Falcon II with Pneumatic Lift is designed to raise track with force. To prevent injury, all personnel should be instructed to wear safety glasses and stand well clear of track when in operation.

Limited Warranty. Eastman warrants to the buyer that the equipment shall be free from defects in materials or workmanship for a period of 180 days commencing on the date of invoice. Any goods or parts claimed by the buyer to be defective must be returned to Eastman, freight charges prepaid, within the 180 day warranty period. If Eastman determines that the goods or parts are defective in materials or workmanship, Eastman's sole obligation under this warranty shall be, at Eastman's sole option, to repair or replace the defective goods or parts or to provide the buyer a credit equal to the portion of the purchase price allocable to the defective goods or parts. This warranty shall not apply if defects are caused by product misuse or neglect, if the machine has been altered or modified by the buyer, or if other than genuine Eastman belts, emery wheels, knives or parts are used in the machine. THIS WARRANTY IS THE ONLY WARRANTY APPLICABLE TO THIS PURCHASE. SELLER DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

Limitation of Liability. Eastman's liability to the buyer, and the buyer's remedies from Eastman, whether in contract, negligence, tort, under any warranty or otherwise, shall be limited to the remedies provided in the foregoing Limited Warranty. In no event shall Eastman have any responsibility or liability to the buyer for (a) any special, indirect, incidental, or consequential damages, including, but not limited to, loss of use, revenue, or profit, even if Eastman has been advised of the possibility of such damages, or (b) any claim against the buyer by any third party. The price stated for the product sold is a consideration for limiting Eastman's liability.

Before operating machine, read these instructions carefully. Familiarize yourself with all functions and adjustments of this equipment.

The Auto Track Falcon II is shipped partially disassembled with all the necessary parts for proper setup and operation. Before any operation can take place, the installation procedure must be followed.

INSTALLATION

Open shipping crate and inspect all parts.

The parts included are:

- (1) Part and Instruction Manual.
 - (1) Track Assembly with Pneumatic Lift.
 - (1) Mast Assembly
 - (2) Support Tubes
 - (1) Digital Control Box
 - (1) Patch Cords
 - (1) Hardware Package containing (8) Screws, (8) Hex Nuts, and (8) Lock Washers
 - (1) Remote Start Device (optional)
 - (1) Foot Pedal Start (optional)
 - (1) Transformer 220 volt (optional)
 - (1) Voltage Stabilizer Kit (optional)
 - (1) Air Compressor Kit (optional)
- see page 10*

Mount Track to Table

Remove track with lift from crate and place on table with track edge parallel to seam in your cutting table. Use a framing square, or similar tool to check machine for cut of fabric exactly as desired. Clamp the track to table at both front and rear ends of track.

Remove (10) ten screws on front lift cover and (6) six screws on rear lift cover. Set covers aside. Mount the (2) two support tubes to the lift frames and secure as shown on page 11. Unroll the nylon lift belt on the front lift and thread belt under front pulley, through lower support tube, over rear pulley, and under rear lock plate. Do not twist belt when threading. Pull lift belt hand tight and secure lock plate screws. See maintenance section for threading diagram. Replace front and rear lift covers.

Mount Mast

Clamp mast to table at front side of track. Connect the cord at base to the socket on digital control box and the other end to the falcon cutter.

Mount Control Box

Clamp control box to table at front side of track. Connect the large patch cord between the control box and the gear housing and the small patch cord between the control box and the socket on the front lift plate.

CAUTION

Check to be sure the power supply is the same voltage rating as stamped on the control box terminal block.

Air Line Hook-Up

The Pneumatic Lift requires a 60-80 psi compressed air line connected properly to the filter regulator. Locate the regulator on the front lift and connect the air line with a 1/4 N.P.T. Quick Connect or equivalent.

Eastman®

Digital Control Box

Familiarization

1. **Main Power:** Activates power to all circuits. Red light is on when switch is at ON position.
2. **Ply Counter:** Counts the number of plies cut.
3. **Enable / Disable:** Enables the ply counter. Set to Disable to cut fabric flaws without incriminating count.
4. **Sharpener:** Allows Falcon Motor to run without moving Falcon Cutter when in ON position. Sharpen knife by pressing button on side of Falcon Cutter with constant pressure. Hold for 10 seconds, then release.
5. **Start Cut:** Press button to begin cutting cycle.
6. **Cutting Speed Adjustment:** Varies speed of cutting machine travel.
7. **Auto/Manual Lift:** Switches lift to Auto, Off or Manual Lift Mode.
8. **Fuse: 2 AMP**
9. **Remote Control Start:** (optional) Remote hand held "Start Cut" button to begin cutting cycle.
10. **Foot Pedal: (optional)** Press with foot to begin cutting cycle.

Operation

CAUTION

Before connecting power supply, make sure voltage rating is same as stamped on terminal block. Damage to control unit may result if incorrect power supply is used.

Control Box

Activate main power by pressing POWER "ON-OFF" switch to ON position. The power light will go on, the digital display will activate.

Switch the "AUTO/MANUAL" lift switch to AUTO position. Cutting can now take place. Pull material to desired length beyond track. Press start button on control box or remote start (optional). Falcon Cutter will start and travel down track. When cutter stops and reverses, the lift mechanism raises track and drops down to clamp end of material. Counter records each cycle of knife motor.

CAUTION

The air lift is designed to raise track with force. To prevent injury, personnel should stand well clear of track when in operation. All operators should be trained in the operation of the machine prior to use.

IMPORTANT: To stop the Auto Track Falcon II at any point during operation, press the power ON-OFF switch to OFF position. To resume cutting, press power ON-OFF switch to on position then press start cut.

Non-Lift Type

The Non-Lift Auto Track Falcon II operates in the same manner as with lift except the track is permanently mounted to the table and will not lift to clamp the fabric.

Adjustments

This machine is adjusted and tuned at the factory for optimal performance. No adjustments other than normal setup are necessary. However, if after continued use the performance level becomes unacceptable, the following procedures should be carried out before repairs are considered.

Cutting Speed

The cutting speed will vary depending on material to be cut. To adjust cutting speed, locate the "Speed" knob on the control box. Turn the knob clockwise to increase the speed of cutter moving down the track and counterclockwise to decrease speed. If cutter tends to lag when cutting, less speed is required.

Air Regulator Valve

The air regulator valve, when adjusted properly at 60-80 PSI, will produce a quiet, smooth lifting motion. To adjust pressure, pull the "Adjust" knob up and turn clockwise to increase pressure and counterclockwise to decrease pressure. After adjustment is made, push knob down to lock in place.

Speed Control Valve

Located on the on the air cylinder, behind the lift cover. The speed control valve adjusts the speed and pressure of lift. To adjust, remove the front cover and locate the speed control valve. Adjust screw OUT to increase speed and pressure or IN to decrease. The track should raise up with minimum force for proper adjustment. Tighten thumb screw when adjustment is complete.

CAUTION

Improper adjustment can cause personal injury or damage to your machine. Adjustment should be made by qualified personnel.

Maintenance

NOTE: All maintenance procedures may be performed with knife motor (Falcon) installed in track. It is not necessary to remove Falcon from Auto Track II mechanism.

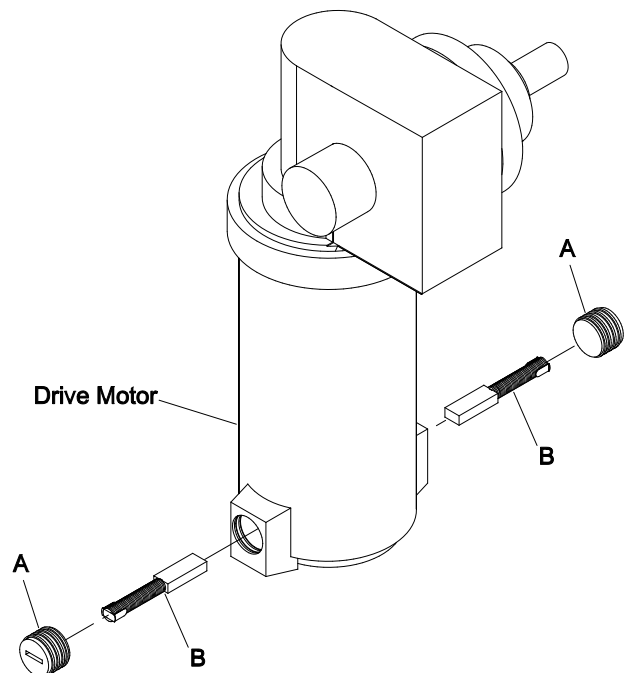

CAUTION

Before performing any of the following procedures, make sure that the attachment plug is disconnected from terminal block on the control box.

Drive Motor Brush Replacement

Remove two (2) caps 'A' from lower motor housing. Pull out Brush assembly 'B' and replace with brush kit. Use Brush p/n 36C1-16 & brush cap p/n 86C7-50.

Eastman®

Knife Motor

WARNING

This machine is equipped with a sharp knife. Keep hands away from knife area at all times. DO NOT handle cutting machine at any time unless terminal block is disconnected from power supply. Knife guard should be raised only enough to clear the material being cut. When machine is not in use, knife guard should be set at its lowest position. DO NOT OPERATE THIS MACHINE WITH SAFETY GUARDS REMOVED.

Knife Sharpener

Turn Power switch to ON. (use CAUTION when sharpening blade). The Falcon Cutter remains in its home position and the blade turns. To obtain a fine, keen edge on the blade, Simultaneously press and hold sharpen button while pressing lightly against sharpener button which is located on the side of the Falcon Cutter. Press and hold button with constant pressure for 10 seconds, then release.

CAUTION

Before performing any of the following procedures, make sure that the attachment plug is disconnected from the terminal block at the control box.

Knife Replacement

Remove pressure foot from knife standard by removing two (2) screws and two (2) washers at "A". Remove thumb nut at front of cutter. Place small drift pin or screwdriver through hole in knife to prevent rotation. Remove knife bolt "B" and knife flange cover "C". Carefully lift out and discard used knife blade.

CAUTION: Discard used knife with care!

Insert new knife blade, bevel side in, by sliding it under shear plate "D". Make sure slots in knife align with tabs on knife hub and that knife is seated flush on hub. Replace all parts in reverse order and check that all fasteners are tightened securely before resuming operation.

NOTE: It is not necessary to remove cutting machine from track or shear plate from machine when replacing knife.

Shear Plate Replacement

Remove knife as described above. Align Falcon Cutter with screw "E" accessible through slot in track. Remove screw "E" and shear plate "D". Replace with new shear plate and reassemble in reverse order. Adjust shear plate and check tightness of "E" before resuming operation.

Shear Plate Adjustment

After replacing shear plate, adjust angle of spring so carbide contacts knife edge at a 3 degree angle. Refer to diagrams for explanation of proper angle.

Sharpener Replacement

Remove knife as described above. Insert screwdriver into slotted head of sharpener button "F" and hold bushing "J" in place. Turn screw counterclockwise to remove button "F" and spring "G". Remove screw "I" to separate bushing "J", spring washer "K" and emery wheel "L". Replace emery wheel and reassemble in reverse order. Check that screw "F" is tightened securely.

Lubrication of Knife Gear

Knife gear "Z" should be removed and replaced if necessary or repacked with grease every three months. Remove knife as described above, to expose bearing retainer plate 79C12-286. Insert a 10-32 x 1 1/2" screw into center of knife flange "X" so that gear, bearing and knife flange can be removed as one unit. Remove three (3) screws "W" and lift out gear assembly. Inspect and replace gear "Z" if necessary or repack gear teeth ONLY with grease. Reassemble in reverse order making sure that bearing "Y" is seated squarely before securing knife flange "X" and retainer plate.

IMPORTANT: Use of too much grease when repacking knife gear "Z" may result in undue strain on knife motor.

Motor Brush Replacement

Remove four (4) screws from cover plate. Remove cover plate and insulation material using care not to damage the insulation. Remove two (2) screws "A" and carefully lift out combined circuit board and motor brush card assembly. DO NOT disconnect wires. Turn brush card over, loosen two (2) screws "B" and pull motor brush pigtailed from under fasteners. Slide brushes out from guides. Insert new brushes so that beveled corner at wire pigtail faces slot "C" in brush guide. Brush pigtail runs from slot "C" to screw fastener "B". Wrap pigtail around screw "B" and tighten screw. Turn circuit board/brush card assembly back to original position. Spread brushes enough to slide over commutator and work board/card assembly down inside cavity until brushes "snap" over commutator. Secure board/card assembly with two (2) screws "A" and carefully replace insulation material. Fasten cover with four (4) screws.

Fuse Replacement

Fuse is visible when cover plate and cover insulation are removed. Take out fuse and replace with fuse of identical rating. Replace insulation and side cover.

Traverse Belt Replacement and Falcon Cutter Installation

Remove five (4) screws holding pulley cover and pull cover off to expose pulley. Remove four (4) screws holding idler cover and pull off cover to expose idler pulley. Remove old belt by loosening clamps "A" on cutting machine baseplate and pull belt out through end of track. Loosen idler support "F" and swing out of way by removing one (1) screw. DO NOT disconnect wires.

Remove cutter at this time if desired. Install disc and bearing "G" in standard of cutter using grease to hold in place. Insert standard in track with knife pointing toward rear idler end of track. Feed new traverse belt through track from rear with teeth facing up. DO NOT twist belt. Pull belt around drive pulley "D" and under idler pulley "E". Fasten belt at clamp "A" on front of cutter. Reposition idler and fasten in closest position. Feed timing belt around pulley "B" and under pulley "C". Pull tight and cut to proper length and fasten under clamp "A" at rear of cutter. Loosen idler support "F", apply tension and retighten to track.

Lubrication

Knife gear should be removed and filled with special Eastman libriko grease every three months (excessive grease will cause overheating).

Pneumatic Motor

(Recommended for heavy weight material)

For best performance, an air pressure of 90 psi is recommended. An air line oiler and filter delivering two to three drops per minute of SAE 5 weight spindle oil is recommended.

* This air line filter and lubricator is mounted inline with the air inlet hose. Check your air line for presence of any foreign particles before installing machine.

*Not sold with machine.

Lift Belt Replacement

Remove the front and rear lift covers. Loosen front and rear belt clamps "C" and remove old lift belt. Insert end of lift belt (181C4-7) under front belt clamp "C" and secure. Thread belt under front pulley "A", over pulley "B" and under rear belt clamp. With track sitting on table, pull belt hand tight and secure belt clamps. Replace front and rear lift covers.

Eastman®

AFT II - Familiarization

Your Eastman **Auto Track Falcon II** has been carefully designed to provide many hours of trouble free operation. The comprehensive exploded part illustrations have been carefully prepared to enable you to easily order replacement parts, as required. Replacement components for this machine can be ordered through your nearest Eastman representative, or directly from the Eastman factory.
