

GLOBAL

INDUSTRIAL SEWING MACHINES

***** PARTS BOOK /
INSTRUCTION MANUAL *****

MOD. ME-18

IMPORTANT

- 1、Before starting the machines , oil bearings of all moving parts .
- 2、Threading Machine see Fig. #1 :
 - — — — — indicates the sewing thread
 - indicates ornamental thread
- 3、Hold the tale of the thread passed through the needle hole , and turn the hand pulley clockwise until the sewing thread is hooked by Latch Hook .
Repeat the same procedure mentioned above after the ornamental thread passes through the looper .
Pass ornamental thread through the thread guide (#102A) , instead of through guide (#102B) for sewing the thinner material , or more take - up stroke is required .
- 4、Motor size: 1/4 HP clutch motor , Pulley size: 2" .

一、注意要點

1、開始使用機器前，先對所有傳動零件添加針車油使運轉更順暢。

2、穿線法：請依圖示穿線

— — — — — 表縫紉線 sewing thread

————— 表修飾線 ornamental thread

3、托住線穿過車針孔 needle hole 的桌子並順時鐘轉動浦力 pulley (#110) 直到縫紉線 sewing thread 被活動勾針 Latch hook (#187) 勾住。在修飾線 ornamental thread 穿過鉤針 looper (#140) 後，重覆上面的動作。當編縫薄料時以引線器 thread guide (#102-A) 代替引線器 thread guide (#102-B) 。

4、馬達尺寸: 1/4 HP 馬力 , 2" 浦力 (馬達轉輪)

REPLACING NEEDLES

Turn the pulley away (clockwise) until the needle reaches in its highest point and loosen the needle clamp nut (#108) by the wrench supplied as accessory to remove the old or defective needle .

Insert the new needle and tighten the needle clamp nut (#108) .

Always replace the old or defective needles .

They affect the satisfactory operation of the machine .

二、車針 needle (#109) 的更換

順時鐘轉動浦力 pulley (#110) 直到車針 needle (#109) 移到它的最高點，並轉開針留 needle clamp nut (#108) 換上新的車針後轉緊針留 needle clamp nut (#108)。當車針 needle(#109) 損壞或太舊時請更換，不然會影響到機器的運轉。

REPLACING LATCH NEEDLE

Turn the pulley until the Latch Needle comes underneath the looper and loosen the set screw (#188) by the driver through the hole located in the Frame Cap (#184) . By this , the Latch Needle can be removed by hand .

Insert the new Latch Needle until it reaches to the deepest point , but make it sure that the Latch Needle is not inserted twisted .

Should you find any excess play on the Latch Needle , adjust the position of the Latch Needle Carrier Guide (L-shape) (#181) by loosening the Screws (#190) , so that the L-shape Guide holds Latch Needle Carrier (#182) lightly . See Fig. #2 .

三、勾針 latch needle (#187) 的更換

轉動浦力 pulley 直到勾針 latch needle(#187) 在鉤針 looper(#140) 的下面，透過前蓋板 frame cap (#184)的洞可轉開螺絲 (#188)，然後勾針 latch needle(#187) 便可用手移動。插入新的勾針 latch needle(#187) 直碰觸到最深點，但小心不要插歪。

假如發現勾針 latch needle 有任何的偏移時，轉動螺絲(#190) 調整勾針 L 形導引器 latch needle carrier guide(L-shape)(#181) 的位置，讓 L 形導引器 L-shape guide 輕輕扣住勾針傳動器 latch needle carrier(#182)。

TIMING OF LOOPER

Looper serves the purpose to reinforce the seams made by sewing thread , always to ease the sewing thread to be hooked by the Latch Needle .

Accordingly , the looper timing is most important to obtain the satisfactory seams .

(a) 、 Adjustment of the Looper Heights

Set the looper so that it will be positioned with the following clearance between the Latch Needles :

On Model: 38 、 38L and Model: 27 、 27L 0.5m/m

On Model: 17 、 17L 0.2m/m

The above adjustments can be made by the Looper Set Screw (#144) .

(b) 、 Looper Toe is to be adjusted as shown by (Fig. #3-a)

(c) 、 Adjustment of the Looper Movement . This can be made by the cam slide set screw #144 . Set the looper , so that it comes to the closest position to the needle , when the needle goes up , but not touch to the needle .

Incorrect setting is the cause of the skip of seams and make it sure that this timing is properly set . See Fig. #4.

(d) 、 Needle Guide (#206) serves the purpose not only to guard the needle in its correct position , but to open the Latch of Needle , occasionally .

Adjust the position of the thread guide by loosening the Needle Guard Bracket Screw #212 so that the top point of the Latch Needle comes to as close as to the Needle Guide , as Shown in the fig. #5.

四、鉤針 looper(#140) 擺動的時序 timing

鉤針 looper(#140) 的目的是修飾縫紉線 sewing thread 編織的縫接口，所以縫紉線要能輕易的被勾針 latch needle(#187) 勾住，總之鉤針 looper(#140)的擺動時序，對於編縫滿意的縫接形狀有很大的影響。

(a) 鉤針 looper 高度的調整

調整螺絲(#144)，讓鉤針 looper(#140) 與勾針 latch needle(#187)的間隙如圖示。

機型 38、38L 和 機型 27、27L : 0.5 m/m

機型 17、17L : 0.2 m/m

(b) 鉤針 looper 前端的調整如 3-a 圖示

(c) 鉤針 looper 移動時序的調整

調整螺絲 cam slide set screw(#144) 來修正鉤針 looper 的移動，讓鉤針 looper(#140)上升時最靠近車針 needle(#109)但又不會互相碰觸，縫接口會跳針是因為上述鉤針 looper 時序 timing 的不正確設定。

(d) 針受 needle guard(#206)

針受 needle guard(#206) 不單只是保護車針 needle 進到正確的位置，也有打開活動勾針 latch needle 的功能。鬆開針受托架螺絲 needle guard bracket screw(#212) 便可調整引線器 thread guide 的位置，讓活動勾針 latch needle 的頂端盡可能的靠近針受 needle guard。

REPLACEMENT OF SEAM FORMING PLATE #161

Seam forming Plate #161 serves a purpose of Chaining Fingers and is important for the satisfactory seam. Replace the plate whenever it is damaged by the needle.

Setting the different plate can be made as follows:

(a) On Model: 38

Seam Forming Plate is designed with the stopper in its right side edge and accordingly, set the plate by pulling the same to the fullest extent.

(b) On Model: 27 and 17

The timing point is marked on the seam forming plate and the base cover and accordingly, set by these points. Fig. #6.

五、出線小針板的調整

出線小針板 seam forming plate(#161) 決定鏈狀的寬度，不同寬度的調整如下。

(a) 機型 38

出線小針板 seam forming plate(#161) 用右側邊緣的制止器來設定，讓縫接口拉到最大的寬度。

(b) 機型 27、機型 17

適當的調整點被標示在出線小針板 seam forming plate(#161)上，依標示點來作設定。

POINT #161 位置	1 STITCH	4 STITCH 3 STITCH	8 STITCH 6 STITCH
機型 38	C-A	C-D	C-E
機型 27	C-B	C-D	C-D
機型 17	---	C-D	C-D
機型 38L	B-A	---	---
機型 27L	C-D	---	---
機型 17L	C-B	---	---

THREAD CARRIER

Thread Carrier (#177) serves the purpose that the sewing thread passes over the Latch of the Needle , as well as to press down the ornamental thread through the looper .

Thread Carrier #177 should be set horizontally on Model: 38、38L , but a little slantly on Model: 27、27L and quite slantly on Model: 17、17L See Fig. #7

六、帶線器 thread carrier(#177)

帶線器 thread carrier(#177) 的功用是當縫紉線 sewing thread 穿過活動勾針 latch needle 後，帶動修飾線穿過鉤針 looper。機型 38、38L 的帶線器 thread carrier 是平直的，機型 27、27L 的帶線器 thread carrier 是有一點斜角，機型 17、17L 的帶線器 thread carrier 則有很大的斜角。

REMOVAL AND SETTING OF FRAME CAP #184

REMOVAL

First, remove the Latch Needle and remove the screws #190 on the Slide #271 and Guide #275. Then loosen two screws #189 and #184 to remove the Frame cap by pulling out.

SETTING

While trying to put the cover plate in its position, turn the pulley in both ways (rear and forward) with manual slight adjustment, so that the two rollers on the latch needle carrier will meet the cam groove, then push the cover forward.

It is suggested that you remove the latch needle beforehand, whenever you start this procedure.

七、前蓋板 frame cap(#184) 的移動與調整

- 移開活動勾針 latch needle 和針織數調整滑桿 stitch number adjusting lever slide(#271) 上的螺絲及布料導引器 seam width guide(#275), 然後鬆開螺絲(#189)和螺絲(#184)後, 便可移動前蓋板 frame cap(#184)。
- 當要放上蓋板 cover plate 前, 用手慢慢的前後轉動浦力 pulley, 並確定活動勾針傳動器 latch needle carrier 上的滾輪緊密的咬合後, 才可關上蓋板 cover plate。

CHANGE LEVER

On Model: 38 and 27, the different numbers of stitches per shell can be obtained by the stitch number adjusting lever. Press the Ratchet #274 for the change to the different stitch number.

On Model: 17, this lever is not equipped and the change of the stitch number can be obtained by the cam (#203-17) attached to the feed gear (#200-17). Stitch number is 6 per shell by two cams and 3 stitches by one cam.

八、針織數 stitch number 的調整

機型 38、27 每一貝形的針織數, 可由針織數調整桿 stitch number adjusting lever 來改變, 利用制輪 ratchet(#274) 便可設定不同的針織數。其每一貝形的針織數可調為 1、4、8 針。

機型 17 利用凸輪 cam(#203-17) 與送料齒輪 feed gear(#200-17), 可調出每一貝形的針織數為 3、6 針,

若是 6 針請配用 2 個凸輪 cam(#203-17),
若是 3 針請配用 1 個凸輪 cam(#203-17)。

ADJUSTING THE FEED VOLUME AND SEAM WIDTH

Feed Volume (Stitch Range)

Model: 38 SERIES: Open the side cover and move the Feed Connecting rod #251 for adjustment , by loosening the nut #254.

Model: 18 SERIES: Change the feed feed eccentric(#14617) for adjustment.

Seam width can be adjusted but very slightly by the seam guide #275 . (Fig. #8)

On Model: 38 、 38L.....10m/m

On Model: 27 、 27L.....7 m/m to 9 m/m

On Model: 17 、 17L.....5 m/m to 6 m/m

Heights of the Feed Lever #261 can be adjusted by the adjuster #259 , located on the Feed Bar Bracket #257 .

By moving the adjuster #259 to the left side , higher position of the feed is obtained and is good for heavier material .

Movement to the right side , lower the heights of the feed dog and is good for thinner material . (Fig. #9)

Fig. #8

Fig. #9

- < ----- Higher Position for Heavier Material
- > Lower Position for Thinner Material

九、貝形寬度 seam width 與貝形(針距)大小 feed volume 及厚薄的調整

(a) 貝形(針距)大小 feed volume

機型 38 系列: 打開邊蓋, 鬆開螺母 nut(#254)便可調整送料連結桿 feed connecting rod(#251), 往上往下移動便可調整貝形(針距)大小 feed volume。

機型 18 系列: 更換偏心凸輪 feed eccentric(#14617) 便可調整針距大小 feed volume。

(b) 貝形寬度 seam width

布料導引器 seam guide(#275)可調整些許的貝形寬度 seam width。

機型 38、38L: 10 m/m

機型 27、27L: 7 m/m to 9 m/m

機型 17、17L: 5 m/m to 6 m/m

(c) 厚薄的調整

向左移動調整器 adjuster(#259) 便可包縫厚重的布料, 向右移動調整器 adjuster(#259) 便可包縫輕薄的布料。

SUGGESTIONS

COBALT Clam-shape stitch

Machine produces the different sizes and taste shell stitches by the application of the different kinds of clothes, thread and yarn.

In order to obtain the better shell stitches, the followings are suggested:

- (a) Make the tension of Looper Thread or Yarn always a little loose.
- (b) For using the synthetic stretchable thread, loosen the tension of the looper thread, and also make the tension of the sewing thread tighter.
- (c) For stretchable materials, make the tension of the looper thread tight to prevent the stretch of the material itself.

Kinds of thread and Yarns to be used for the Large shell stitch:

For Model: 38 (Large size Shell stitch)Wool and synthetic

For Model: 27 (Medium size shell stitch) ...Wool and synthetic

For Model: 17 (Small size shell stitch) Cotton and tetlon

(d) In order to obtain more loose tension on the looper thread, adjust the angle of the thread guide, as illustrated. (Fig. #10)

(e) If necessary, pass the looper thread through #102A after #102B before through to #102C. (Fig. #11)

十、建議

應用不同的布料、線和紗可以包縫出不同的貝形飾邊, 請依下列程序作調整。

- (a) 調整紗拉 tension 讓鉤針線 looper thread 或紗 yarn 有一點寬鬆。
- (b) 使用會伸縮的合成線時, 調整紗拉 tension 讓鉤針線 looper thread 寬鬆一點, 讓縫紉線 sewing thread 有緊一點。

(c) 使用會伸縮的布料時，調整紗拉 tension 讓鉤針線 looper thread 緊一點，防止布料自行拉長。

機型 38：大貝飾邊、毛線 wool 和合成線 synthetic

機型 27：中貝飾邊、毛線 wool 和合成線 synthetic

機型 17：小貝飾邊、棉料 cotton 和尼龍線 tetlon

(d) 調整引線器 thread guide 的角度可得到較寬鬆的鉤針線 looper thread，如圖 Fig#.10

(e) 如果必要的話，請將鉤針線 looper thread 依 #102B、#120C、 #120A、 #120B 順序穿線，如圖 Fig#.11。

L207	FEED LIFTING LEVER FOR MODEL: 38 , MODEL: 27
L207-17	FEED LIFTING LEVER FOR MODEL: 17
L208	FEED LIFTING LEVER ROCKER SCREW FOR MODEL: 38 , MODEL: 27
L208-17	FEED LIFTING LEVER ROCKER SCREW FOR MODEL: 17
L208A	FEED LIFTING LEVER ROCKER SCREW NUT
L209	FEED LIFTING CAM GUIDE FOR MODEL: 38
L209-17	FEED LIFTING CAM GUIDE FOR MODEL: 17
L210	FEED LIFTING GEAR ROCKER SCREW FOR MODEL: 38
L210-17	FEED LIFTING GEAR ROCKER SCREW FOR MODEL: 17
L214	FEED LIFTING GEAR BRACKET SET SCREW
L251	FEED CONNECTING ROD
L252	STITCH ADJUSTING STUD
L253	FEED ROLLER
L254	STITCH ADJUSTING STUD NUT
L255	FEED LEVER
L256	FEED LEVER STUD
L257	FEED BAR BRACKET
L258	FEED BAR BRACKET ROCKER SCREW
L259	FEED LIFTING ADJUSTER
L259-27L	FEED LIFTING ADJUSTER FOR MODEL: 27L
L260	FEED BAR BRACKET PRESSING SPRING
L261	FEED DOG
L261-38L	FEED DOG (WIDTH ROW / 寬板)
L272	FEED LIFTING LEVER CONNECTING SLIDE

7-2. Feeding Mechanism (II)

7-2. FEEDING MECHANISM (II)	
PARTS NO.	DESCRIPTION
L1183-16	SCREW
L14530	FEED DOG BAR
L146A	MAIN SHAFT
L14617	FEED ECCENTRIC
L14617-4	FEED ECCENTRIC NO.4
L14617-5	FEED ECCENTRIC NO.5
L14617-6	FEED ECCENTRIC NO.6
L14617-8	FEED ECCENTRIC NO.8
L14617-10	FEED ECCENTRIC NO.10
L14646	FEED BAR ROCKER SCREW
L14647	FEED DOG
L1493-16	SCREW
L2031-4	WASHER
L274	SPRING
L3613	PIN
