OPERATION, LUBRICATION AND CARE

BEFORE STARTING

1. Fill oil cup A lubricate a few drops at oil hole B. Push in T and turn the machine by hand for a few revolutions to make sure the oil is spread over contact surface.
2. Make sure sharpener is in locked position. (Driver pulley apart from the crank.)

BE CAREFUL

1. In cold weather, please keep machine in the warm place to avoid the lubricate oil freeze.
2. The motor should be turned on and off a few times before running continuously, This Permits the oil to warm up and flow easily into the closely fit moving parts.
3. Do not use sewing machine oil. Use No.30-50 motor oil.
4. Be sure that in 3-phase machine the direction of rotation is as ARROW-INDICATION on C.

OPERATION

1. To operate the machine, please first connect the plug with power supply socket. Then, while pressing Handle for Safety F (M30602) you switch on switch I.
2. The Presser Rod can be moved upward or downward when you switch off the machine.
3. When you switch on the machine while pressing Handle for Safety F (M30602), the Presser Rod must be locked at a certain position. To move it up or downward, you can just press the Pressure Foot Lever G (M30617).
4. If the Handle for Safety F is released during machine running, the machine will stop automatically, and the Presser

TO SHARPEN THE KNIFE

1. Put the machine away from piles of material.
2. Drop pressure foot by level locked in the lowest position.
3. Press lever E downward with a slow, firm pressure to engage sharpening mechanism. Too fast lever action may cause lever to lock. If this occurs, lift lever J and start over. After a few tries you will feel correct operating pressure.

BE CAREFUL

- Do not operate sharpener without knife in machine or the sharpener will be damaged.
- Do not operate sharpener with cutting material laid in machine.
- Do not shut off motor while sharpener is in motion.

CARE OF MACHINE

1. Use air hose or bellows and blow lint out of motor and sharpener twice a week.
2. Remove cover K and clean out lint once a week.
3. Remove knife and clean knife slide with slot cleaner at least once a day.
4. To prevent undue accumulation of lint, do not oil plate rollers.
5. If rollers stick, remove from plate and wash in cleaning solvent.

LUBRICATION

	ONCE A WEEK	ONCE A MONTH
Fill oil cup A (always keeping up to red line).	<p>One drop oil to</p> <ol style="list-style-type: none"> 1. Tubes M & N 2. Pulley Shaft-W 3. Belt pulleys-V & H 4. Idler Gear D 	<p>Remove plug at S and insert grease. Remove the cover K, Give Grease on the screw shaft with extension.</p>

TROUBLE, CAUSE, AND REMEDY OF MACHINE

<p>Press release lever, Sharpener does not drive.</p> <ol style="list-style-type: none"> (1) Driver pulley (M1-5-60) is oiled, clean it please. (2) Driver pulley (M1-5-60) was damaged, change a new one please. <p>Sharpener falls abnormally.</p> <p>The gears in sharpener and screw shaft are not oil. Please insert grease in it.</p> <p>Knife is not sharp by Sharpening.</p> <ol style="list-style-type: none"> (1) Belts was damaged, changed a new one please. (2) Knife wear out, change a new one please. 	<ol style="list-style-type: none"> 4. Machine can not be running. <ol style="list-style-type: none"> (1) Check to see that electric supply voltage is normal. (2) Check to see that the electric circuit isn't cut. (3) Check to see that the switch isn't damaged. 5. Cutting resistance is big <ol style="list-style-type: none"> (1) The roller of base plate runs not smooth, Clean off dusts stay at roller inside; (2) Roller rack assy (J6-1-4) damaged, Change a new one please; (3) The blade is blunt, Sharpen the blade.
