SERVICE MANUAL

1. Machine introduction

This machine adopts synchronous feeding and unique fabric feeding mechanism to optimize its climbing performance, and features powerful and smooth thick-fabric feeding, even stitches, tidy and nice-looking. Lines are drawn by horizontal-type hook, taken up by slide bar mechanism and driven by synchronous belts on upper and lower shafts, which has ensured high speed and low noise performance.

This product is widely applied in sewing thick materials such as automobile cushion, sofa, purse and tent etc.

2. Main technical specification

Application	Secondary thick fabric/ thick fabric
Maximum sewing speed	2500s.p.m
Longest stitch	9mm
Needle bar travel	36mm
Needle	DP×17 (Nm125~Nm180) Standard Nm160 (23#)
Ways of lubrication	Oiling for oil line (automatic oiling for hook)
Hook	Automatic large vertical lubrication hook
Height of pressure foot	Manual control: 9mm, kneel control: 16mm
Motor	Servo motor
Needle clearance	8 mm (standard)

★ Special needle clearance **WF 1515** :

3.2, 4, 4.8, 6.4 , 9.5, 12.7, 16, 19 and 25.4 mm

★ Special needle clearance **WF 1515-AUT** :

3.2, 4, 4.8, 6.4 , 9.5, 12.7, 16 mm

1

3. Installation (See Figure 1)

1. Installation of the frame bedplate connection hook block and the frame rubber cushion:

Fix the auxiliary connection hook block ① and the frame rubber cushion ② on the bedplate with nails ③.

2. Fix the oil tray ④ on the bedplate with eight screw nails according to the position indicated on the figure.

3. Install the kneel-controlled joint ⑤, kneel-controlled lifting installation crank ⑨ and curved bar ⑦ according to the direction of the kneel-controlled lifting bar shaft ⑧.

4. Adjust the direction of cushion blocks with fixed screws ⑥ and ⑩ and ⑪.

4. Installation of waste oil container (See Figure 2)

1. Install the oil discharge stopper①, oil seal② and the washer③ on the oil tray. Cover the cushion block⑤ and the washer⑧ on the fixed screw④. Then fix them with nut⑥.
2. Turn the waste oil pot⑦ to the oil discharge stopper① after fixing.

5. Adjusting the belt tension (See Figure 3)

Move the height of the motor when adjusting the belt tension. Press the middle part of the belt with force of 9.8N. The relaxation shall be 15mm at the moment.

Note: Before adjusting, please cut off the power and ensure that the motor has stopped.

6. Installation of belt cover (See Figure 4)

1. Screw the belt cover support⑦ to the bolt hole on the head.
2. Install the belt cover (right) ① on the head with fixed screws ② and ⑧.
3. Mount the belt cover (left) ③ on the claw AB of belt cover (right) ①.
4. Fix the belt cover (left) ③ with fixed screws ④, ⑤ and ⑥.

Note: Please confirm that the belt cover doesn't contact with the belt and the driving wheel after installing the belt cover.

5

7. Oiling (See Figure 5)

ONE. Oiling of surface

1. Screw off the panel bolts.
2. Open the panel ① to the direction of arrow.
3. Properly oil the part indicated by the arrow in every day.
4. Close the panel.
5. Tighten the bolts.

TWO. Machine oiling

1. Add a proper amount of oil to the parts indicated by the arrow in every day.
2. Before the first operation or when the machine has not been in use for a long time, add oil to the parts indicated by the arrow, and dismantle head cover ② to add a proper amount of oil to each felt and oil line.

THREE. Oil slot oiling

1. Insert the bulge at the bottom of the oil slot③ into the waste oil hole which is used for receiving oil.
2. Connect the oil pipe④ with the filter⑤ of the oil slot. Then fix it with clamp.
3. Add sewing machine oil into the oil slot till the HIGH position.
4. Oil if the level is under LOW.
5. Run the sewing machine after oiling. You can see the oil moving up and down in oil window C in normal condition. (with the revolution more than 1500rpm)

8. Cleaning the oil slot (See Figure 6)

1. Dismantle the oil tube on the oil slot.
2. Remove the butterfly nut① and take down the cover (upper) ②, filter③ and cover (lower) ④ to clean.
3. Take down the fixed screw⑤ of the filter box and clean the filtering core⑥ and magnet⑦ inside it.
4. When changing the engine oil inside the oil slot, dismantle the stop bolt⑧ and then the waste oil can be discharged into the waste oil container. Tighten the stop bolt⑧ after discharging. (Note: Discharge the engine oil before taking out the oil slot.)
5. Put the filtering core⑥ and magnet⑦ into the filter box and fix them with fixed screw ⑤ on the cover (upper)②.
6. Put with the order of cover (lower)④, filter③ and cover (upper)② and then fix them on the oil slot with butterfly screw①.
7. Insert the oil tube into the oil slot and fix with clamp.
8. Loosen the nut⑩ when adjusting the oil quantity of the hook with adjusting screw⑨. When loosening the nut clockwise, the oil quantity decreases; otherwise, it increases.
9. Put the paper near the periphery of the hook for about five seconds. It is proper for the oil quantity if there is oil stain on the paper as shown in the figure.

Scrap of paper

7

9. Installation of needle (See Figure 7)

1. Run the driving wheel and lift the needle bar to the highest position.
2. Loosen the needle fixed bolt ② to make the long slot of the needle ① face the left.
3. Insert the needle into the innermost part.
4. Tighten the needle fixed bolt ②.

8

10. Threading of the bottom thread (See Figure 8)

1. Cock the washer ① of the hook and draw the core out.
2. During installation, correctly insert the hook shaft and lay down the washer.
3. Have the bottom thread gone through the threading slot ② of the hook and then pull the thread through the tension spring. Then draw it out from the thread hole ③.
4. The hook core shall turn along the arrow after pulling the bottom thread.

9

11 Installation of thread winder guide (See Figure 9)

Install the thread winder guide ① on the cover with fixed screw ②.

12. Winding the bottom thread (See Figure 10)

1. Thread according to the order of ①~④ and then wind the coil on the hook core.
2. Press down the winding bar A.
3. Loosen the fixed screw B and adjust the regulating panel to make the thread wind to the position of about 80%.
4. If the winding thread deviates from the course, move the thread winder guide C forward and backward to adjust and then fix with fixed screw D.
5. After the winding is over, the winding rod separates and stops automatically.

13. Threading (See Figure 11)

Thread according to the order indicated on the figure.

14. Adjusting the length of stitches (See Figure 12)

Turn the feed adjusting tray ① to the left (or right) and make the adjusting mark aim at the required number.

Press the backstitch spanner ② downward to start and release the spanner to resume the normal stitch.

13

15. Adjusting the thread tension (Figure 13)

1. Adjusting the tension of feeding thread

Turn the thread tension nut① clockwise and the remained thread on the needle top becomes shorter after cutting; otherwise, it becomes longer.

Turn the thread tension nut② clockwise, than the tension of feeding thread increases; otherwise, the tension decreases.

2. Adjusting the tension of bottom thread

Turn the thread tension screw① clockwise, than the tension of bottom thread increases; otherwise, the tension decreases.

14

16. Adjusting the take-up spring (See Figure 14)

1. When changing the movement amount of the take-up spring

a. Loosen the fixed screw② of the stopper and move the stopper③ to the left or right in order to adjust the take-up spring①.

b. The movement amount of the take-up spring increases if moving the stopper to the right; otherwise it decreases.

2. When changing the strength of the take-up spring

Loosen the nut④. Then turn the spring shaft⑤ anticlockwise, the strength increases; otherwise, it decreases.

17. Lifting the pressure foot (See Figure 15)

1. When stopping the pressure foot in the rise position, uplift the pressure foot lifting bar① of presser spanner to the arrow position. Stop after the pressure foot rises 9mm.

2. Put down the presser spanner when lowering the pressure foot. It will be back to the original position.

18. Adjusting the pressure of the pressure foot (See Figure 16)

Move the pressure foot adjusting screw① to the right, then the pressure increases; otherwise, it decreases. Tighten the fixed nut② after adjusting.

19. Adjusting the hook needle bed (See Figure 17)

Please confirm the position of the needle bed after changing the hook. When it is in standard position, the hook needle bed② is about 0.1~0.2mm away from the side of the needle. If it is incorrect, please curve the hook needle bed for adjusting.

1. When curving the hook needle bed inwards, insert the screwdriver into the outside of the hook needle bed.

2. When curving the hook needle bed outwards, insert the screwdriver into the inside of the hook needle bed.

18

20. Resetting of the safety device (See Figure 18)

During the sewing, the safety device starts if exerting over-force on the hook. The hook of driving wheel fails to work at the moment. Please eliminate the failures prior to resetting after the safety device starts.

1. Press the button ① on the head and reverse the driving wheel with force.

2. Resetting is finished after you hear the sound of crack.

Note: Run the driving wheel with hands to confirm whether the button ① is reset.

19

21. Adjusting the position of thread separation hook (See Figure 19)

1. Turn the driving wheel to the normal direction and transfer the thread separation hook ① to the final position.

2. Turn the hook cover ② to the arrow position and make the hook stopper ③ up against the slot of the needle bed ④.

3. Loosen the fixed screw ⑤ of the thread separation slot and adjust the clearance between the thread separation hook and the bulge A of hook cover to 0.1~0.2mm.

22. Relations between the needle and the hook (See Figure 20)

1. Turn the adjusting knob of needle distance to 0.
2. Turn the driving wheel. After the lowest point of the needle bar rises to 2.3mm, loosen the needle bar joint screw①. Adjust the distance from the upper part of the needle hole of needle② to the hook top③ to 1.5mm and then tighten.
3. Turn the driving wheel. Rise the needle bar to 2.3mm from the lowest point. Adjust the centers of the hook top③ and the needle② to make them basically the same. Then tighten the fixed screws④ of two screw gears (smaller ones). Aim the first screw with V-shape front of the two fixed screws④ at the V-shape slot of the hook shaft. Then tighten and fix.
4. At the position where the centers of both the hook top③ and the needle② are basically the same, loosen the fixed screw⑥ of hook shaft pillow and then move it to the left or right in order to adjust the clearance between the hook top and the needle to 0.05~0.1mm. Then tighten the fixed screw⑥.
5. Loosen the fixed screw⑤ of two screw gears (bigger ones). Move the screw gear (bigger one) to the left or right to make the centers of the hook top③ and the needle② basically the same. Tighten the fixed screw⑤. Aim the first screw of two fixed screws⑤ at the flat part of the lower shaft and then tighten.

21

23. Adjusting the alternation amount of the pressure foot (See Figure 21)

Regulate the rise amount with adjusting tray①. Turn clockwise, the rise amount increases; otherwise, it decreases.

22

24. Adjusting the cutter (See Figure 22)

Adjusting the position of fixed cutter:

Loosen the fixed screw① of fixed cutter holder with the right and left sides of the fixed cutter front end respectively $1.5 \pm 0.2\text{mm}$ and $2 \pm 0.2\text{mm}$ away from the needle bed front end. The front and back of the cutter holder are up against the stairs of the shaft pillow and tighten the fixed screw①. Please use the face R of fixed cutter scale③ attached to determine the distance.

Please use the face R of fixed scale③ for the right side and face L for the left side.

Adjust the pressure of cutter:

Loosen the fixed screw② of the moveable cutter. Turn the upper wheel and shift the moveable cutter to adjust its pressure. If the distance from the front end of moveable cutter to the front end of fixed cutter is $6 \sim 7\text{mm}$, the cutter pressure is standard.

25. Confirming the stop position (See Figure 23)

1. Adjust the stop position when the machine cover scale① is the same as the upper wheel scale②. As for the upper wheel scale, please refer to the relevant list.
2. When adjusting the position of the upper stop needle, please use screw③. When adjusting the position of the lower stop needle, please use screw④.

Upper wheel scale list	
White-white center	Position of upper stop needle
Yellow	Position of lower stop needle
Red	Used for adjusting the cutting thread cam
Colorless	Reverse the position of lifting needle

26. List of sewing speed

Up-and-down alternation amount	Stitch: less than 6mm	Stitch: 6mm~9mm
Less than 2.5mm	2,500rpm	1,800rpm
2.5mm~4mm	2,200rpm	1,800rpm
4mm~4.75mm	1,800rpm	1,800rpm
4.75mm~6.5mm	1,600rpm	1,600rpm

Set the maximum revolution according to different conditions. Please don't exceed the set value.

27. Sewing problems and troubleshooting

Problems	Causes	Troubleshooting
1. Broken stitching (feeding thread residue of 2~3mm on the back of the fabric)	①Scars on the thread, needle top, hook top and the fixed slot on the hook inner circle of the needle bed. ②Strong upper tension. ③The needle touches the hook top. ④The oil is insufficient in the hook. ⑤Weak feeding thread tension. ⑥Powerful take-up spring and small transfer amount. ⑦Over fast or over slow synchronization of the needle and the hook.	○Polish the scars on the hook top with fine sand paper. ○File the inner circle fixing slot of the hook of the needle bed. ○Reduce the feeding thread tension. ○Refer to the content in 19. Relations between the Needle and the Hook. ○Adjust the oil quantity (Refer to the content in 7. Oiling.) ○Increase the feeding thread tension. ○Weaken the take-up spring and increase the movement amount. ○Refer to the content in 19. Relations between the Needle and the Hook.
2. Skipped stitching	①Over fast or over slow synchronization of the needle and the hook. ②Weak pressure for the pressure foot. ③Incorrect clearance between the upper part of the needle hole and the hook top. ④Wrong needle type.	○Refer to the content in 19. Relations between the Needle and the Hook. ○Tighten the adjusting screw of the pressure foot. ○Refer to the content in 19. Relations between the Needle and the Hook. ○Change to a little bit bigger needle.
3. poor stringing	①Not threading under the thread tension spring of the hook cover. ②Poor processing of the thread. ③The hook core doesn't slide. ④Weak bottom thread tension. ⑤Strong bottom thread winding. ⑥Damaged needle top.	○Refer to the content in 9. Threading of the Bottom Thread. ○Polish with fine sand paper or file. ○Change the hook core or hook. ○Increase the bottom thread tension. ○Decrease the bottom thread winding tension. ○Change the needle.

This technical drawing is an exploded view of a mechanical assembly, likely a door latch or lock mechanism. The components are numbered 1 through 32. The diagram shows the following parts and their assembly relationships:

- Part 1:** The main vertical body of the latch.
- Part 2:** A pin or bolt that fits into the top of part 1.
- Part 3:** A small pin or cap screw at the very top of part 1.
- Part 4:** A small pin or cap screw.
- Part 5:** A small pin or cap screw.
- Part 6:** A small pin or cap screw.
- Part 7:** A long vertical rod or pin.
- Part 8:** A small pin or cap screw.
- Part 9:** A small pin or cap screw.
- Part 10:** A small pin or cap screw.
- Part 11:** A small rectangular component, possibly a switch or sensor.
- Part 12:** A small pin or cap screw.
- Part 13:** A small pin or cap screw.
- Part 14:** A U-shaped bracket or plate.
- Part 15:** A small pin or cap screw.
- Part 16:** A small rectangular plate or cover.
- Part 17:** A small pin or cap screw.
- Part 18:** A small rectangular plate or cover.
- Part 19:** A small pin or cap screw.
- Part 20:** A large circular component, possibly a handle or knob.
- Part 21:** A small pin or cap screw.
- Part 22:** A long horizontal rod or pin.
- Part 23:** A small pin or cap screw.
- Part 24:** A small pin or cap screw.
- Part 25:** A small pin or cap screw.
- Part 26:** A small pin or cap screw.
- Part 27:** A small rectangular plate or cover.
- Part 28:** A small rectangular plate or cover.
- Part 29:** A small pin or cap screw.
- Part 30:** A small rectangular plate or cover.
- Part 31:** A small pin or cap screw.
- Part 32:** A small pin or cap screw.

The diagram uses dashed lines to indicate the assembly path and alignment of the parts. A large dashed line connects the main assembly to a detailed view of the handle/knob assembly (parts 20-32).
