EFKA MOTORS

Loading Parameters On EFKA Motors

1. Depress and hold P key on Efka Motor Driver and give power to machine. You will see "C.O.D." on Efka Motor Driver panel.
2. Press key >> once on Efka Motor Driver you will get number 000 on display.
3. Enter code 591 over the display (You may do this by using keys +,-,>>)
4. Press key E on Efka Motor Driver you will see parameter 4.0.0 on display.
5. Now enter parameter that you want to change or see contents. For example, enter 396 (prm 396).
6. Press key E on Efka Motor Driver You will get current parameter value on display. Then enter desired value (e.g., enter 1) (you may do this by using + or - keys).
7. Depress key P on Efka Motor Driver.
8. You may alter other parameters in similar manner.

Prm 290.....	5	(Machine Mode)
Prm 396.....	1	(Driver motor in frequency system)
Prm 161.....	1	(Direction of the motor rotation)
Prm 111.....	400	(Max Speed)
Prm 115.....	20	(Take-Off Speed)
Prm 110.....	350	(Soft start)
Prm 370.....	400	(Speed Limit)
Prm 240.....	3	(Needle Up-Down)
Prm 171.....		(Setup to Needle Position)(PE1,PE2,PA1,PA2)

9. Depress P key over the Efka Motor Driver twice when there is no more parameters to alter. On the screen, it will display (400)
10. Enter test screen on machine panel, depress head start button making sure head rotates at least one-full turn this makes recording in motor the change made.
11. Now you have laden parameter written.

EFKA MOTORS**How to Master Reset Efka Motor?**

1. Depress and hold P key on Efka Motor Driver and give power to machine. You will see "C.O.D." on Efka Motor Driver panel.
2. Press key >> once on Efka Motor Driver you will get number 000 on display.
3. Enter code 591 over the display (You may do this by using keys +,-,>>)
4. Press key E on Efka Motor Driver you will see parameter 4.0.0. on display.
5. Enter number 290 (prm 290) on display.
6. Press key E on Efka Motor Driver. You should get any arbitrary number on display now enter some different number (You may do this by using + or – keys. For example go a head and enter 5 if the number on display is 3).
7. Depress key P on Efka Motor Driver.
8. Press key P again on Efka Motor Driver. On the screen, it will display (400)
9. Enter test screen on machine panel, depress head start button making sure head rotates at least one-full turn. This makes recording in motor the change made.
10. Right now Master reset is ready made.

Not : Before entering the new parameters, make the 290. parameter 5 again. and then enter the new parameters.
